Irvine, California September 2, 2005 – Imron Corporation’s authorized dealer Benson Systems Inc. has just announced that is was recently awarded a contract install Imron’s Open Architecture / Open Platform IS2000 at the Mayo Clinic Hospital in Phoenix, Arizona.

The conversion project is expected to be completed shortly and includes all parts of the existing system which was previously controlled by a large competitor’s software product. Expansion of the system to include the new Mayo Clinic Specialty Building (under construction) is also planned.

“The IS2000 is a perfect fit for this project”, said a company spokesman for Imron Corporation, “it uses all of the existing hardware and we have already pre-converted the databases. Our alarm graphics, integrated video and simple interface made the decision to switch to us pretty easy too”.

“We’ve done a lot of work to make the IS2000 truly Open Architecture / Open Platform so that we can come right in and be the software of choice for the client and the dealer”, said Imron Hussain, company President and founder, “it’s great to see the customer say ‘WOW’ when they see what our system can do compared to the software it replaces.”

The Open Architecture / Open Platform IS2000 is key to Imron’s authorized dealers’ successes in replacing aging software at competitors’ sites across the country. The IS2000 includes active alarm graphics, an organized database and easy to use graphical user controls. Many control systems once perceived as proprietary or obsolete can now be updated and maintained by using the IS2000 solution. Complete technical information is available at www.imron.com.

ABOUT Imron Corporation -: Founded in 1997, Imron Corporation is a major provider of Security Management Systems to brand name manufacturers around the world. Early products were first used by large-scale facilities to bridge the gap between separate systems from various manufacturers. These successes lead to the creation of private labeled systems and software for manufacturers to sell under their own brand names, providing integration solutions to large proprietary dealer groups. In 2003, Imron Corporation expanded its operations to include complete system solutions direct to systems integrators, combining its state of the art software and field proven and reliable hardware in one value conscious package, the IS2000.

About Mayo Clinic:- Mayo Clinic is the first and largest integrated group practice in the world. Specialists from every medical specialty work together to care for patients, joined by common systems and a philosophy of "the needs of the patient come first." More than 2,500 physicians and scientists and 42,000 allied health staff work at the original clinic in Rochester, Minn., and newer clinics in Jacksonville, Fla., and Arizona. Collectively, the three clinics treat more than half a million people each year.
